BRILL – Ideas for the Garden

Nottingham based Henton & Chattell, the nationwide garden machinery distributor, will be showing the complete range of BRILL garden machinery to the gardening public at BBC Gardeners' World Live at Birmingham NEC (10-14 June 2009). The company have been solely distributing BRILL since September 2009.

BRILL stands for quality and tradition. Solid, reliable engineering combined with unique benefits are the key features of BRILL garden machinery. The full range includes cylinder mowers, rotary mowers including the evolution and Steelline ranges, scarifiers, shredders and lawn tractors.

BRILL lead the way with their RazorCut cylinder mowers; 'contact-free' cylinder technology for quiet, effortless mowing, precision sharpened top and bottom blades, and a variable cutting height from as low as 14mm up to 45mm creating a superb finish to the lawn. All models are available with an optional grasscatcher.

This year sees the introduction of the RazorCut Lion 38. With all the features of the RazorCut Premium range, mowing is even easier with the battery powered cylinder mower. Using the technology of Lithium ion batteries; no memory effect, low self-discharge and efficient DC motors with minimum loss of heat, meaning lower running costs, longer

service life of the battery and longer operating times. The RazorCut Lion 38 has a variable cutting height of between 20-45mm and is ideal for lawns up to 400 sq m, cutting up to 20% more than comparable models.

The BRILL evolution range of rotary mowers set new standards in lawn mower technology and functional design. The clever new space saving concept for storing mowers is ideal for today's requirements, allowing the unit to be stood upright in the smallest of places. The petrol models are equipped with a special fuel tank so even with a full tank of fuel the mower can be stored upright. Means easy cleaning too! In addition, the patented dual channel air system with effective cutting technology ensures a perfect cut every time. The system collects the grass and sucks the cuttings in an airflow, achieving the optimum mowing performance even with the lowest cutting height.

With the introduction of the BRILL evolution LION 36, a 36cm cut cordless rotary mower offering outstanding mowing performance with all the benefits of the evolution range and Lithium Ion technology. Under ideal conditions the powerful 3.9 Ah Lithium Ion battery allows the user to cut an area of up to 400 sq m.

The BRILL Gardenboy is the universal tool for preparing and looking after your garden beds. The innovative electric soil harrower can be used for harrowing, loosening, weeding edge trimming and scarifying. Weighing just 2.3kg and with its unique ergonomic design, the Gardenboy takes the hard work out of looking after your garden.

For comfortable mowing of larger areas, the BRILL Crossover lawn tractors are ideal. Equipped with either a Honda or Briggs & Stratton engine, these tractors offer great

performance for cutting and collecting in all conditions at a competitive price. An optional mulch system also available.

The BRILL range of garden machinery can be purchased through Henton & Chattell's dealer network they support. For more details about the product or to find a local dealer, call 0115 986 6646 or log onto www.brillgarden.co.uk
